## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election without traverse of claims 1-33 in the reply filed on 7/28/05 is acknowledged.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1,13-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over LaTorre (U.S. Patent 4,836,062) in view of Hartz (U.S. Patent 3,000,097).

LaTorre teaches, a nose assembly structured to be mounted to an actuator (42) of the type having a base and a translatable piston (DE), the nose assembly being structured to be cooperable with a fastener (H) having an elongated threaded pin (F) and a collar with the collar being affixed to the pin, nose assembly comprising: a threaded thimble (WT) structured to be mounted to one of the base and the piston, the thimble being structured to be connectable with the pin; an anvil (NT) having a support and at least a first blade (12), the at least first blade being disposed on the support, the support being structured to be mounted to the other of the base and the piston (Figs. 1-3 and 14).

LaTorre fails to teach the nose assembly being structured to cut the collar to facilitate its removal from the pin, and one of the thimble and the anvil being translatable with respect to the other of the thimble and the anvil along a cutting direction generally parallel with the

Art Unit: 3726

longitudinal extent of the pin whereby relative translation occurs between the at least first blade and the collar along the cutting direction to cuttngly engage the blade with the collar.

Hartz teaches the nose assembly being structured to cut (31) the collar to facilitate its removal from the pin, and one of the thimble and the anvil being translatable with respect to the other of the thimble and the anvil along a cutting direction generally parallel with the longitudinal extent of the pin whereby relative translation occurs between the at least first blade and the collar along the cutting direction to cuttngly engage the blade with the collar (Figs 1-8).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to add the feature of Hartz on the apparatus of LaTorre so as to easily and quickly remove the fastener.

It has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2 USPQ 2d 1647 (1987).

#### ***Allowable Subject Matter***

4. Claims 2-12 and 17-33 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
